

December - Nature Spotter Sheet

Bare trees! Many deciduous trees will have lost all of their leaves. This year some are very late to drop them though!

The bare trees make it easy to spot old bird's nests.

It is also easier to spot birds on the bare branches!

Evergreen trees stand out more in Winter as they are providing some colour!

Birds are more likely to come to your feeders as food is scarce.

Snow, frost and ice have a big impact on wildlife. Keep track of the first day it appears!
