

## Litter and Waste

Looks at how litter and waste effects the environment and how we can reduce how much litter and waste we make at Home.

Waste: items we have no further use for, they may be useful to someone else so we may be able to pass them on for reuse (clothing to charity shops) or recycling (paper, plastic, cans).

Litter: “waste in the wrong place”- if it’s in the bin its waste, if it’s on the ground or in the water its litter

**Are you are seeing litter on your street, your road, your local park or any public place? Why not try carrying out your own 2 minute street clean. Click on the logo to find out how.**

It takes two minutes out of your day whenever it suits you to clean up a stretch of road, a street or any public place.

Take a picture of the litter you collect  
Then post it on whatever social media site you use – facebook, Twitter, Instagram and tag the post with #2minutestreetclean.

*You will then automatically become part of the #2minutestreetclean campaign and be champion for a litter free environment. Keep it short and simple!*

## Health and Safety:

- Get an adult to help, don't pick up sharp objects or dog litter.
- Wear protective gloves and wash your hands afterwards.
- DO NOT pick up needles or glass or any other sharps.
- Do not pick up anything organic, we're talking dead animals and dog litter again here.
- Dispose of the litter responsibly.
- BE VERY CAREFUL OF TRAFFIC.
