GLOBAL GOALS
BOOK CLUB

In 2002 William Kamkwamba was hungry, the crops were failing because there was no rain and this meant that his mother and father did not have enough money to send him to school. William read in a book that windmills could help create electricity and help to pump water to irrigate the crops so that he and his frieds in his village had food to eat. So William and his friends decided to build one themselves. William was only 14 years old at the time.

If you could choose one thing to change about the world, what would it be? How would you go about creating that change?
