

# Composting At Home

Composting is a Biological process that needs organic waste, water and air. Composting involves a wide variety of organisms naturally present in our environment.

What Can we put into are compost:

grass clippings, weeds, leaves, plants, cut flowers, cooked or uncooked veg, fruit & peels, tea, coffee, grains, and cereals, twigs, hedge clippings, paper (cut up, in small amounts)

For more info on food waste click link below [www.mywaste.ie](http://www.mywaste.ie)
