

February - Nature Spotter Sheet

Frogspawn can be found in lakes, ponds, ditches and even large puddles. Keep your eyes peeled this month! Remember don't move or even touch it!

Elder trees are one of the earliest to have new leaves emerging in Spring.

Bumblebees are appearing on sunny days. Queen bees go looking for a new place to build a hive.

Dandelions begin to crop up in grassy areas. They are an important early food source for bees.

Crocuses are springing up in parks and gardens. They are found in a variety of colours.

Blackbirds are one of the earliest birds to begin nest building. Look out for (brown coloured) females gathering nest material.
