- 04 Water bottles as part of the School Meals Programme
- 05 Case study
- 05 Some more notes
- 06 Setting up your campaign & Action Plan Template

More and more schools are taking on the challenge to reduce or eliminate single-use plastics...

In this booklet, you will find information about how to set up a campaign in your school to go plastic free and reduce single-use.

WHY SHOULD SCHOOLS GO PLASTIC FREE?

There are over 900,000 full-time students in primary and secondary education across Ireland – almost 20% of Ireland’s population.

Schools are integral to communities and can be a powerful influencing force. If all schools adopted environmentally sustainable practices, and removed single-use plastics, this would have a massive impact on the volume of Ireland’s plastic consumption and on our society. Schools play an important role in educating students about their impact on the planet and fostering a culture of conscientiousness and good environmental practices which can carry on into adulthood.

Reduce and Reuse are always better than Recycle! A need for more recycling is often highlighted as the key to becoming sustainable. However, recycling has high energy requirements and is not a perfect process. Much more critical is to reduce our total waste in the first place by using less, and by reusing products as much as possible. For example, using a disposable compostable coffee cup may seem to be a step in the right direction, but in the end, it still requires a high volume of natural resources (i.e. land and water) to produce, perpetuates a culture of single-use, and these products are rarely disposed of correctly. A reusable cup is a much more sustainable choice.

It’s not just about plastic...

Plastic is ubiquitous but it is also an extremely valuable and versatile material. However, it should be remembered that the greater problem is our **culture of single use as a whole**. The resources that we use to produce all of our products are limited, and producing materials always has an environmental impact. For example, the mining of metals to produce drinks cans destroys natural habitats and uses up valuable resources, while large-scale production of compostable cups and cutlery requires land and water resources to grow the original plant material, and also, if compostable items end up in the general waste bin or recycling bin by accident, they aren’t going anywhere! These products need to go into an aerobic compost system in order to breakdown correctly. The take-home message is that while of course, we will always have an impact on the natural world, we can greatly reduce this impact by producing less waste, in any form. Say no to single-use and give possessions a value again!

CONSIDERATIONS BEFORE YOUR CAMPAIGN

PLAN – decide what your aim is, the actions you need to take to achieve this and a realistic time frame. Set regular **quantifiable** targets so you can measure your success and maintain motivation.

AWARENESS – raise awareness about the campaign and involve as many people as possible in making it happen – make sure people know why the school is cutting out plastic, the negative effects of plastic for the environment and health, the benefits of reducing our consumption both for ourselves as individuals and for the global community and ways that individuals can cut down their own plastic consumption. Why not collect all the plastic bottles used in a week and create a display, so students and staff can see the level of waste produced?

STAFF – children and young people are often easy to persuade towards sustainable practices and feel passionately about environmental issues. It can be more challenging to change the behaviours of adults, who have long-established habits and preferences. Teaching staff may also be under pressure due to workload, managing extra-curricular programmes and other priorities and interests. However, it is very important that staff act as role-models and support any environmental campaign in the school. A positive, rewarding attitude is more likely to see positive results and support than forcing a new system on unwilling staff who may see it as an addition to their workload or an inconvenience.

TIME – like any change, going plastic free will inevitably have some teething issues and possible set-backs. Don't expect complete success overnight but set a realistic time-frame with mini-targets to achieve along the way.

INFRASTRUCTURE – consider what changes may be necessary to the school's infrastructure to facilitate a move to plastic free. For example, are there water fountains or drinking-water taps available for bottle refills?

COST – there may be an initial cost involved in becoming plastic free, but the investment soon pays off. Look into possible grants or funding options to install water fountains in your school, or to design reusable bottles with the school logo. Organise a fundraiser such as a cake sale or no-uniform day.

ALTERNATIVES TO SINGLE-USE PRODUCTS

Plastic bottles – ditch single-use and get a reusable bottle instead, do your own research into what type is best for you: we recommend stainless steel or aluminium rather than hard plastic. Stainless steel is durable and keep drinks deliciously cool, but aluminium is lighter to carry and cheaper to buy. Are there accessible taps or water fountains in the school where students can refill? Encourage parents to swap out juices in plastic bottles or cartons with straws, and to use dilutable squash instead. Some people will use the same single-use bottle over and over again, but from a health perspective this is not recommended as plastic degrades and can release harmful chemicals into drinking water.

Straws – since April 2019 schools are prohibited by law from buying single-use plastics such as straws. Students can be encouraged again to avoid straws by using a reusable bottle rather than bringing a new juice carton every day.

Metal, bamboo and paper straws are now widely available as an alternative to plastic straws.

Cling-film – Reduce cling-film use with alternatives like beeswax wrap covers which can be rinsed and re-used; these covers are widely available at most health-food shops. We do not recommend tinfoil as an alternative as this still creates more waste. Good quality reusable lunch boxes can be purchased in a variety of shapes and sizes which also reduces the need for cling-film. Any cling-film that is used can go in the recycling bin along with other soft plastics, so long as it is clean, dry and loose. Soiled cling-film should go in the general waste bin.

Food packaging – this may be the most difficult single-use plastic to control, as many food products come pre-packaged, and it very much depends on what parents provide in children's lunchboxes.

A point to highlight is that a healthy lunch, such as a sandwich and piece of fruit, can be provided without any need for plastic packaging, and many items that come pre-packaged are highly processed with a high salt or sugar content. If lunches are provided by a local shop or in-school caterer, speak to them about using less packaging, or switching to reusable cutlery and delph instead of plastic.

Some businesses may be reluctant at first to facilitate a move to plastic free/reducing single-use. They may be daunted by the prospect of changing their established systems and processes, concerned about costs or hygiene protocols. Support them with this transition by researching alternatives, long-term savings and highlighting the student body’s concern for the environment.

Since 2021, soft plastics (that are **clean, dry and loose**) can go in the recycling bin but bear in mind the priority should always be to **reduce** the amount of waste in the first place.

Resources – be conscious of the resources you are using in class, more and more unsustainable products such as plastic “twist” crayons are showing up on school booklists, creating unnecessary plastic waste. Choose good old-fashioned colouring pencils or crayons instead.

Balloons - a major offender in terms of plastic litter is balloons. Every balloon that is released, whether intentionally at a graduation ceremony or other celebration, or accidentally, ends up as litter on land, or more often in our oceans. Both the plastic of the balloon and the cord or ribbon it is tied to are hazardous to wildlife causing entanglement, choking and death from ingestion. Please do not release balloons at school events! There are many alternatives to mark a special occasion – including blowing bubbles, flying kites, planting a tree or decorating with reusable bunting, flags or streamers.

Glitter – glitter is often overlooked as a source of plastic pollution, but these tiny fragments of plastic end up washed down our sinks and make their way into our oceans, where they are consumed by fish and marine invertebrates and have a major detrimental impact on ocean food-chains. Biodegradable glitter made from plant cellulose is available but be aware that this is not always completely plastic-free.

Wrapping books – many parents wrap school-books in plastic wrap to protect them throughout the year. Can you encourage the use of wrapping paper instead or even the re-use of plastic wrap? Remember though that glittery, metallic or laminated papers have a blended plastic component and so cannot be recycled.

WATER BOTTLES AS PART OF THE SCHOOL MEALS PROGRAMME

Reducing plastic waste can be particularly daunting for DEIS schools or schools who receive pre-packed lunches and water bottles as part of the School Meals Programme, however it is becoming increasingly normalized for schools to install water filters as an alternative to single-use bottles. The best course of action very much depends on the requirements and limitations of the individual school. For example, if there are drinking water taps in each classroom, perhaps you only need to supply a reusable bottle and cancel the single-use bottle supply. Larger schools or secondary schools may be better served by installing drinking fountains or a water filtration system.

Talking to your catering provider

Many school-lunch providers are happy to facilitate a switch to reusable bottles, and some larger caterers are now working in partnership with water filtration companies to supply filtration systems or dispensers for schools. Contact your supplier to discuss options with them.

Talking to your Board of Management

Approach your Board of Management well-informed and with a clearly mapped out proposal. Calculate the long-term savings and environmental impact of switching away from single-use bottles and use this to make your case to the Board of Management. The Board of Management may be able to fund all, or part, of the costs incurred, with the remainder raised through grants or community fundraising events.

Grants

Many local authorities offer a **Waste Prevention Grant** which you could apply for to subsidise the cost involved in installing water fountains. The amount of funding available varies between local authorities, get in touch with your local authority to see if they have a grant available and what the requirements are – the school may be able to apply itself, or the Environment Awareness Officer in the local authority may have to make the submission on the school's behalf. Deadlines are generally early in the calendar year.

Local authorities may also offer grants under the **Community Environment Action Fund**, or the **Climate Innovation Fund**, to support collaborative sustainability projects between local authorities and schools or community groups. Other national or local grant schemes may be available, which you may be able to apply for with the support of community groups such as Tidy Towns.

In 2018, Newpark Comprehensive School in Blackrock, Co. Dublin became the first school in Ireland to go plastic free.

They have attributed a lot of their success to initiating a campaign that was primarily student-led by a core team of passionate transition years. The students investigated alternatives to single-use plastic and liaised with the board of management about the campaign and with their catering provider, to ban all single-use plastics from their school canteen. They also contacted local shops in the area to ask for their support. They sourced and designed their own "Plastic Outta the Park" stainless steel bottles which were added to the book-list as a mandatory piece of kit for incoming first years. They also received huge media attention by getting in touch with local radio and tv stations and by holding a large campaign launch to which they invited members of environmental NGOs, local politicians and council members.

**PLASTIC FREE
NEWPARK**

SOME MORE NOTES...

Petitioning

Petitioning is an important part of the fight to reduce single-use plastics. Write to your TDs, MEPs, and local councilors to support campaigns against single-use, and to hold politicians accountable for taking action on these issues for society in general.

Youth advocacy

Since 2018 there has been a huge increase in youth advocacy for the environment. Certainly, a lot of this can be accredited to the impact of Swedish teenage activist Greta Thunberg who started "striking" from school in August 2018 in order to protest government inaction on climate change. Since then, the "Fridays for Future" campaign has snow-balled and it was reported in August 2022 that strikes had occurred in 8,600 cities across 231 countries. The Fridays for Future campaign in Ireland is led by a network of secondary school activists who organise regular Friday school strikes at locations across the country.

Eco-anxiety

We are seeing increasing instances of anxiety and depression both in young people and adults, in relation to our current ecological crises of biodiversity loss, climate change and pollution. There is no denying that these are grave, large-scale issues which can be overwhelming. It's important to remember, that while it's critical that we all do our part, any one person is not responsible for a global problem, nor are they tasked with solving it on their own. In other words, it's important to recognize that we each need to take responsibility for our actions and behaviours but also acknowledge that there are very few aspects of life over which we have absolute certainty or control. Working together to make more sustainable choices, and collectively putting pressure on big businesses and government are actions we can all take to help our environment. Positive news stories should be shared, and successes celebrated, to counteract feelings of powerlessness. It can also be helpful to have group discussions and acknowledge these feelings and concerns and share support to develop resilience to setbacks or uncertainties. Rather than always focusing on the problems, encourage positive experiences in nature, such as a woodland or seaside walk, going bird-watching, growing your own veg patch or otherwise getting out and about.

SETTING UP YOUR CAMPAIGN & ACTION PLAN TEMPLATE

Follow the Green-Schools 7 Steps to guide you through your campaign:

- 01 Green-Schools Committee** – Do you have a strong team in place who will lead the campaign?
- 02 Environmental Review** – Carry out a bin survey and quantify the plastic produced in your school over a week. This will help you set a target. Distribute surveys to students, staff and parents about their knowledge and behaviours regarding single-use plastics.
- 03 Action Plan** – use the template provided to set up your Action Plan – set S.M.A.R.T. targets: Specific, Measurable, Achievable, Relevant and Timely.
- 04 Monitoring & Evaluation** – assess your progress regularly, are you on track? If you aren't meeting your targets is there something you can do differently to make this happen? Perhaps you need to adjust your goals slightly if they were over-ambitious to begin.
- 05 Curriculum Work** – tie in your campaign to classwork e.g. art, science, geography, history, SPHE.
- 06 Informing & Involving** – involve the whole school body through a campaign action day, competitions, quizzes, announcements and fun activities. Involve the wider community by working with local groups and businesses and keeping parents informed of the campaign.
- 07 Green Code** – come up with a slogan for your campaign, create posters with the slogan, or why not design reusable e.g. bottles with your chosen slogan and school crest!

Additional resources for schools, including posters and PowerPoint presentations, are available at: www.greenschoolsireland.org/resources

PLASTIC FREE ACTION PLAN (EXAMPLE)

School Name: *Example National School*

Green-Schools Coordinator: *Ms McExample*

Remember to choose a goal that is S.M.A.R.T.: **S**pecific, **M**easurable, **A**chievable, **R**elevant and **T**imely.

Goal: *Example N.S. aim to reduce plastic bottles by 75% between 1st September and 26th June. Our motivation for undertaking this campaign is the shocking statistic that there will be more plastic in the oceans than fish by 2050.*

Trouble-shooting

Possible obstacles or setbacks to achieving our goal:	Solutions, alternatives and actions:
Parents habitually provide children with plastic bottled drinks for lunch.	<p>We will write to parents to inform them of our aim and our concerns for the environment.</p> <p>We will offer an alternative by installing drinking water fountains in school.</p> <p>We will fundraise for branded reusable school bottles to be added to the school booklist.</p> <p>We will highlight the negative impact of processed sugary drinks for children's health.</p>

Action Plan

Action steps to take	Person/group responsible	Timeframe	Progress made
Speak to principal and staff about our campaign	Ms McExample	By 10 th September	Had meeting with principal on 6 th , she agreed to support campaign. Provided information session to staff at lunchtime 7 th .
Create posters to inform school	Sarah and Eoin from the Green-Schools Committee	By 15 th September	Completed and displayed 13 th September
Hold a campaign launch day	Organised by Ms McExample, Committee and 6 th class	1 st October
