

Questionnaires/Surveys

Questionnaires and surveys are a great way at assessing levels of awareness regarding energy. These can be conducted at an early stage in your work on the energy theme and then again later so you can monitor the success of your programme. Questionnaires and surveys can be distributed within the school or even to parents, families and the local community! See Sample below.

Date of Baseline Survey:

Date of Most Recent Survey:

Number of students surveyed:

	Year 1	Year 2
What % of students and staff can name one or more types of energy?		
What % of students and staff can list 3 non-renewable sources of energy / fossil fuels?		
What % of students and staff can list 3 renewable sources of energy?		
What % of students and staff can list 3 ways to reduce energy use in the school?		
What % of students and staff know how electricity is transported to the school?		
What % of students and staff can name an issue related to non-renewable sources of energy?		

Make sure to publicise your results so that the whole school community is aware of the results, for example, charts could be formulated in Maths or Art class and displayed on the Green-Schools notice board.
